End-to-End Retail omnichannel sales pipeline

A retail company receives order data from multiple sources such as **REST APIs**, **CSV files**, and **PostgreSQL databases**. To ensure reliable analytics, the data is processed through a layered architecture consisting of **Raw (Bronze)**, **Clean (Silver)**, and **Curated (Gold)** layers.

Architecture: Star Schema

Over all architecture:

Conclusion :

This architecture follows the **Medallion Architecture (Bronze → Silver → Gold)** approach. It ensures data quality through validation and cleansing, supports incremental loading and late-arriving records, maintains historical customer changes using **SCD Type 2**, and delivers an analytics-ready **Star Schema** for business reporting and decision-making.
